

Instructions for Posting (Employer Website)

Please post the below information on [GNY Equipment, Inc.'s website](#) as one of the recruitment steps. Once you have posted the job, please send us a copy of the screen shot for the first day of posting for our review and records. You must also provide us with screen shots for a day in the middle of the posting period and for the last day of posting. On the last day of posting please sign the Certification of Posting (enclosed herein).

Job Title: Software Developer

Location: Bay Shore, NY

Job Duties: Develop, test, and maintain scalable cloud-based enterprise applications to streamline business processes. Translate functional and technical requirements into scalable, production-ready builds for enterprise applications. Develop performance efficient, highly scalable, configurable, and available software applications and systems. Contribute to design reviews and code standards to ensure maintainable and reliable software systems. Design and implement software solutions for specific use cases that provide frameworks, interfaces, and services that can be extended and reused for future requirements. Create and maintain unit, integration, and system test cases to ensure code quality and application reliability. Participate in code review sessions. Recommend strategies to reduce risks in software development projects. Develop and maintain backend systems using Java/J2EE and related technologies, leveraging established object-oriented design patterns. Diagnose and resolve software performance issues, scalability constraints, and production incidents in time-critical environments. Collaborate effectively with cross-functional teams, including engineering, quality assurance, and operations, to deliver reliable software solutions aligned with business objectives. Apply industry-standard software engineering practices, design patterns, and modern development tools to maintain development efficiency and quality. Utilize tools such as MS Visual Studio Code, IntelliJ IDEA and relational databases (e.g., MySQL) for development. Document and communicate software engineering best practices, development processes, and technical standards. Perform root cause analysis of production incidents and implement long-term solutions to prevent recurrence.

Requirements: Masters or foreign equivalent degree in Computer Science, Software Engineering, Information Technology, or a closely related field, plus 3 years of experience in the position offered or related occupation working as a software engineer performing full lifecycle software development.

Must have 3 years of experience in:

- working with relational databases and SQL;
- working with Java/J2EE and relational databases including MySQL;
- developing and supporting distributed systems and enterprise applications;
- working with object-oriented design principles and software development best practices;
- working with CI/CD tools and frameworks including Jenkins and JUnit.

In lieu of a Masters plus 3 years of experience, the employer will accept a Bachelors or foreign equivalent degree in Computer Science, Software Engineering, Information Technology, or a closely related field, plus 5 years of experience in the position offered or related occupation working as a Software Engineer performing full lifecycle software development.

Must have 3 years of experience in:

- working with relational databases and SQL;
- working with Java/J2EE and relational databases including MySQL;
- developing and supporting distributed systems and enterprise applications;
- working with object-oriented design principles and software development best practices;
- working with CI/CD tools and frameworks including Jenkins and JUnit.

Required to work on-site at Bay Shore, NY office. May work remotely one day every two weeks.

Salary: \$189,592 per year.
